INTRODUCTION

Welcome! This home inspection training program has two primary goals:

- To provide you with a sound introduction to the components, materials and mechanics of house systems that you will encounter and evaluate as a home inspector;
- To provide you with a solid understanding of inspection processes, strategies and standards of practice that will help define the scope of your inspections.

We hope you enjoy this training program and develop a good understanding of the various house systems as you proceed. Good luck!

FEATURES OF THIS PROGRAM

This program is structured to help you learn and retain the key concepts of home inspection. It also will help you form a set of best practices for conducting inspections. A number of features are included to help you master the information and put your knowledge into practice:

- Topics are organized into evenly paced Study Sessions. Each Session begins with learning objectives and key words to set up the important concepts you should master by the end of the Session. Each Session concludes with Quick Quizzes to help you test your understanding. Answers to Quick Quizzes are provided so you can check your results.
- Scope and Introduction sections present the ASHI® (American Society of Home Inspectors) Standards of Practice for each major topic. Standards help you define a professional, consistent depth and breadth for your inspections.
- An Inspection Checklist at the end of each section summarizes the important components you will be inspecting and their typical problems. You can use this as a set of field notes during your own inspections.
- The Inspection Tools list will help you build your toolkit of “must have” and optional tools for the job.
- An Inspection Procedures section provides some general guidelines to conducting your inspection of each major house system. This feature will help you develop a methodology to complement your technical knowledge.
- Field Exercises give you an opportunity to turn your knowledge into real world experience.

SUMMARY

The road we have paved for you is designed to be easy and enjoyable to follow. We trust it will lead you quickly to your destination of success in the home inspection profession.

ACKNOWLEDGMENTS

Thanks to Kevin O'Malley for his inspiration, advice and guidance. Thanks also to James Dobney for his invaluable input and encouragement. Special thanks are extended to Dan Friedman for his numerous and significant contributions.

We are grateful for the contributions of: Duncan Hannay, Richard Weldon, Peter Yeates, Tony Wong, Graham Clarke, Ian Cunliffe, Joe Seymour, Charles Gravely, Graham Lobban, Dave Frost, Gerard Gransauil, Jim Stroud, Diana DeSantis, David Ballantyne, Shawn Carr and Steve Liew.

Special thanks are also extended to Susan Bonham, Dearbhla Lynch, Lucia Cardoso-Tavares, Jill Brownlee, Ida Cristello and Rita Minicucci-Colavecchia who have brought everything together. Thanks also to Jim Lingerfelt for his invaluable editing assistance.

► SERVICE DROP AND SERVICE ENTRANCE

	1.0	OBJECTIVE	3
	1.1	Objectives	3
STUDY SESSION 1	2.0	SCOPE AND INTRODUCTION	5
	2.1	Scope.....	5
	2.2	Introduction – General	14
	2.2.1	Introduction to Section 1.....	16
	2.2.2	The Inspection Process	16
	2.2.3	General Inspection Tips	18
STUDY SESSION 2	3.0	THE BASICS OF ELECTRICITY	23
STUDY SESSION 3	4.0	SERVICE DROP.....	45
	4.1	Service Drop Description.....	46
	4.2	Conditions.....	49
	4.2.1	Overhead wires too low	49
	4.2.2	Overhead wires too high.....	51
	4.2.3	Damaged or frayed wires.....	52
	4.2.4	Trees or vines interfering with wires	52
	4.2.5	Wires too close to doors or windows.....	52
	4.2.6	Wires not well secured to the house.....	53
	4.2.7	Poor connection between the service drop and service entrance.....	54
	4.2.8	Inadequate clearance from roof	55
	4.2.9	Service lateral problems.....	56
	4.3	General Strategy.....	56
STUDY SESSION 4	5.0	SERVICE ENTRANCE WIRES	60
	5.1	Conditions.....	63
	5.1.1	No drip loop.....	63
	5.1.2	No masthead or service cap	64
	5.1.3	Masthead not weather-tight.....	64
	5.1.4	Wires too close to the roof	65
	5.1.5	Mast or conduit bent	65
	5.1.6	Mast or conduit rusted	66
	5.1.7	Mast rotted	66
	5.1.8	Mast, conduit or cable not well secured to the building	66
	5.1.9	Mast, conduit or cable not weather-tight	67
	5.1.10	Conduit or cable not well sealed at house wall penetration.....	68
	5.1.11	Service entrance cable frayed, damaged or covered by siding	69
	5.2	Summary	70

SECTION ONE: SERVICE DROP AND SERVICE ENTRANCE

STUDY SESSION 5	6.0	SERVICE SIZE.....	74
	6.1	Why does it matter?	74
	6.2	Determining service size.....	78
<hr/>			
FIELD EXERCISE #1			
	7.0	INSPECTION TOOLS.....	96
	8.0	INSPECTION CHECKLIST.....	97
	9.0	INSPECTION PROCEDURES.....	98
		ANSWERS TO QUICK QUIZZES.....	99

► THE SERVICE BOX, GROUNDING AND PANELS

	1.0	OBJECTIVES	3
STUDY SESSION 1	2.0	SCOPE AND INTRODUCTION.....	6
	2.1	Scope	6
	2.2	Introduction.....	13
	3.0	SERVICE BOX (SERVICE EQUIPMENT OR SERVICE PANEL)	14
	3.1	Conditions	16
	3.1.1	Poor access or location.....	16
	3.1.2	Loose.....	18
	3.1.3	Rust or water in box	18
	3.1.4	Unprotected openings	19
	3.1.5	Inappropriate support material	20
	3.1.6	Damaged parts.....	20
	3.1.7	Overheating.....	21
	3.1.8	Incorrect main fuse or breaker size; box rating too small.....	21
	3.1.9	Service entrance wires exposed in the house	22
	3.1.10	Poor connections	22
	3.1.11	Improper taps	23
	3.1.12	Neutral wire bypasses service box	24
	3.1.13	Fused neutral.....	25
	3.1.14	Fuses upstream of disconnect switch	26
	3.1.15	Obsolete box	27
	3.1.16	Exterior box not weather-tight	27
	3.1.17	Not rated for aluminum.....	27
STUDY SESSION 2	4.0	SYSTEM GROUNDING.....	31
	4.1	Conditions	42
	4.1.1	No grounding	43
	4.1.2	Ground wire attached to plastic pipe.....	43
	4.1.3	Ground wire after meters and valves	43
	4.1.4	Spliced ground wire	44
	4.1.5	Ground wire attached to abandoned pipe.....	44
	4.1.6	Loose or poor connections	45
	4.1.7	Ground connections not accessible.....	45
	4.1.8	Ground rod cut off.....	45
	4.1.9	Corroded ground wire	45
	4.1.10	Undersized ground wire	46
	4.1.11	Neutral bonded to ground wire after service box	46
	4.1.12	Neutral wires not bonded to ground wire at service box	47
	4.1.13	Service box not bonded to grounding wire	47
	4.1.14	No ground in subpanel feeder wires	48

SECTION TWO: THE SERVICE BOX, GROUNDING AND PANELS

STUDY SESSION 3	5.0	DISTRIBUTION PANELS.....	53
STUDY SESSION 4	5.1	Conditions Found In All Panels.....	70
	5.1.1	Obsolete and/or fused neutrals.....	70
	5.1.2	Damaged panel or components.....	71
	5.1.3	Loose panel.....	72
	5.1.4	Inappropriate support material.....	73
	5.1.5	Loose or missing door.....	74
	5.1.6	Openings in panel.....	74
	5.1.7	Panel too small.....	75
	5.1.8	Overheating.....	75
	5.1.9	Rust or water in the panel.....	76
	5.1.10	Circuits not labeled.....	76
	5.1.11	Crowded.....	76
	5.1.12	Poor access.....	77
	5.1.13	Installed upside down.....	77
	5.1.14	Panel not suitable for use with aluminum wire.....	78
	5.1.15	Poor location.....	78
	5.1.16	Outdoor panel not weather-tight.....	78
	5.2	Conditions unique to subpanels.....	79
	5.2.1	Subpanel and/or feeder wire not adequately protected.....	79
	5.2.2	Neutral and ground wires bonded at the subpanel.....	82
	5.2.3	No ground wire.....	84
STUDY SESSION 5	5.3	Conditions found with fuses or breakers.....	88
	5.3.1	Fuses or breakers too big.....	88
	5.3.2	Double taps.....	89
	5.3.3	Multi-wire circuits fed by one bus.....	91
	5.4	Conditions found with fuses only.....	94
	5.4.1	Fuses bypassed.....	95
	5.4.2	Fuses loose.....	95
	5.4.3	Fuse holders loose or broken.....	95
	5.4.4	Fuses for multi-wire circuits not linked.....	95
	5.5	Conditions found with breakers only.....	96
	5.5.1	Multi-wire circuits not linked.....	97
	5.5.2	Too many breakers.....	98
	5.5.3	Wrong breaker in panel.....	98
	5.5.4	Loose or damaged breakers.....	98
	5.6	Conditions found with panel wires.....	99
	5.6.1	Sheathing not removed.....	99
	5.6.2	Overheating.....	100
	5.6.3	Loose connections.....	100
	5.6.4	Damaged.....	100
	5.6.5	Not well-secured.....	101
	5.6.6	Wires crossing bus bars.....	102
	5.6.7	Abandoned wires in the panel.....	102
FIELD EXERCISE #1	6.0	INSPECTION TOOLS.....	110
	7.0	INSPECTION CHECKLIST.....	111
	8.0	INSPECTION PROCEDURES.....	112
		ANSWERS TO QUICK QUIZZES.....	114

► THE DISTRIBUTION SYSTEM

	1.0	OBJECTIVES	4
	2.0	SCOPE AND INTRODUCTION	7
STUDY SESSION 1	2.1	Scope.....	7
	2.2	Introduction.....	10
	3.0	BRANCH CIRCUIT WIRING (Distribution Wiring)	10
	3.1	General strategy for inspecting branch circuit wiring.....	22
STUDY SESSION 2	3.2	Conditions	27
	3.2.1	Damaged wire	27
	3.2.2	Wire not well secured	28
	3.2.3	Loose connections.....	28
	3.2.4	Open splices	28
	3.2.5	Wires too close to ducts, pipes, vents, chimneys and flues	29
	3.2.6	Wires too close to the edge of studs or joists.....	29
	3.2.7	Wires run through steel studs without protection	30
	3.2.8	Exposed wires on walls or ceilings.....	31
	3.2.9	Exposed wires in attics.....	32
	3.2.10	Wire run under carpets.....	33
	3.2.11	Indoor cable used outdoors	33
	3.2.12	Buried cable not rated for buried use	34
	3.2.13	Overhead wires not stranded.....	34
	3.2.14	Household wiring used as extension cord.....	34
	3.2.15	Undersized wire	35
	3.2.16	Improper color coding.....	35
	3.2.17	Abandoned wire	35
STUDY SESSION 3	3.3	Knob-and-tube conditions.....	41
	3.3.1	Connections not in boxes	41
	3.3.2	Brittle wire, insulation or sheathing.....	42
	3.3.3	Wire buried in insulation.....	42
	3.3.4	Fused neutrals	43
	3.4	Aluminum wire conditions	44
	3.4.1	Connectors not compatible with aluminum	45
	3.4.2	No anti-oxidant grease on stranded wires	46
	3.4.3	Overheating.....	47
	3.4.4	General strategy for inspecting aluminum wire.....	48
	3.5	Outdoor wiring conditions	48

SECTION THREE: THE DISTRIBUTION SYSTEM

STUDY SESSION 4	4.0	LIGHTS, OUTLETS, SWITCHES AND JUNCTION BOXES..52	
	4.1	Conditions at lights	52
	4.1.1	Damaged or loose	52
	4.1.2	Overheating.....	52
	4.1.3	Inoperative	53
	4.1.4	Obsolete	53
	4.1.5	Not grounded	53
	4.1.6	Missing.....	54
	4.1.7	Poor stairway lighting.....	54
	4.1.8	Conventional lights used in wet areas.....	55
	4.1.9	Improper potlight installations.....	55
	4.1.10	Improper closet lighting.....	57
	4.1.11	Heat lamps over doors	58
	4.1.12	Isolating links needed on pull chains	58
	4.2	Conditions at receptacles (outlets).....	59
	4.2.1	Damaged	60
	4.2.2	Loose.....	60
	4.2.3	Overheating.....	60
	4.2.4	Ungrounded outlets.....	60
	4.2.5	Open neutral or open hot connections	62
	4.2.6	Reversed polarity outlets.....	62
	4.2.7	Inoperative	65
	4.2.8	Wrong type receptacle	65
	4.2.9	No GFIS	66
	4.2.10	Overheated neutral on multi-wire branch circuits	70
	4.2.11	Worn receptacles.....	72
	4.2.12	Broken pin or blade in slots	72
	4.2.13	Not enough receptacles	72
	4.2.14	Outlets too close to bathtubs or showers.....	74
	4.2.15	Too far from basins	74
	4.2.16	Outlets above electric baseboard heaters	75
	4.2.17	Outlets in floors or in counter tops	76
	4.2.18	Outlets within 18 inches of the garage floor.....	77
	4.2.19	Dedicated circuits needed	77
STUDY SESSION 5	4.3	Conditions at switches	82
	4.3.1	Damaged	82
	4.3.2	Loose.....	82
	4.3.3	Overheating.....	82
	4.3.4	Inoperative	82
	4.3.5	Obsolete	83
	4.3.6	Poor location near furnace	83
	4.3.7	Poor location in bathroom.....	84
	4.3.8	Faulty three-way or four-way switches.....	85
	4.3.9	Dimmer switches without positive shut off	86
	4.3.10	Garbage disposal problems.....	86

SECTION THREE: THE DISTRIBUTION SYSTEM

4.4 Conditions at junction boxes.....87
4.4.1 Damaged88
4.4.2 Missing.....88
4.4.3 Loose.....88
4.4.4 Overheating.....88
4.4.5 Not grounded88
4.4.6 Cover loose or missing.....89
4.4.7 Crowded.....89
4.4.8 Concealed boxes89

FIELD EXERCISE #1

5.0 SMOKE DETECTORS89
6.0 INSPECTION TOOLS.....100
7.0 INSPECTION CHECKLIST101
8.0 INSPECTION PROCEDURES103
9.0 BIBLIOGRAPHY105
ANSWERS TO QUICK QUIZZES.....106
